

USER DATA SHEETS

RECORD SHEETS FOR USERS TO RECORD DATA & INFORMATION ABOUT THEIR FILM PROCESS SYSTEM

The USER DATA SHEETS provided in this document provide useful tools for labs running the ILFORD FPC (Film Process Control) system. They enable a lab to record vital background information about their film process systems and if used consistently they will form an archive of facts that can help when trying to investigate process control and process related problems.

Labs often customise development times to suit their processor and type of work they do most frequently. The USER DATA SHEETS can be used to record this customised information in an orderly fashion so that, it can be accessed easily by the processor's operators.

The following USER DATA SHEETS are provided:

Film development time chart

Preparation record sheet for developer

Preparation record sheet for stop bath

Preparation record sheet for fixer

A blank sheet for making miscellaneous notes

A record sheet for contact names, address, etc. connected with your process system

We suggest that copies of each USER DATA SHEET you want to use are printed out and kept with the other ILFORD FPC process control system near the relevant processor.
